

SHIP UNLOADER - USA

CLEAN OPERATION FROM SHIP TO SILO

The delivery of this Siwertell ship unloader was part of a newly built cement terminal. After unloading the cement from ships or rail cars, it's further transfered to silos for storage or trucks for further transport

About

This Siwertell ship unloader is designed with a unique extra feature allowing for a side-tilting motion of the unloader's slewing function. This feature offers an extended reach underneath hatch coaming and into the corners of the ship's cargo hold, which enables an excellent "layer by layer" method in discharging the cement, avoiding avalanches and thereby minimising dust emissions from the hold.

Siwertell also supplied a movable transfer trolley and two horizontal screw conveyor for conveying of the cement from the ship unloader to the silo area, as well as four screw conveyors for handling the cement in the terminal. The jetty screw conveyor is covered with a cover belt.

The main parts of the ship unloader were pre-assembled in the port of Richmond, shipped on a barge to Sacramento in order for a quick final assembly to take place on site.

FACTS

CATEGORIES:

Ship Unloading

MATERIALS:

• Cement

CUSTOMER:

Cemex

ADDITIONAL FACTS:

Unloader model Siwertell ST 490-D with

side tilting arm system

Unloading capacity 900t/h

Maximum ship size Panamax, beam = 32m

Total weight 393

type HSC-800, rail car discharge conveyors HSC 630, transfer conveyors HSC 630

PRODUCTS:

• Ship unloading

LOCATION:

Sacramento, California, USA
